

**DUAL FREQUENCY VCXO (10 MHz TO 1.4 GHz)****Features**

- Available with any-rate output frequencies from 10 to 945 MHz and selected frequencies to 1.4 GHz
- Two selectable output frequencies
- Industry-standard 7x5 mm package
- Available CMOS, LVPECL, LVDS & CML outputs
- 3x better frequency stability than SAW-based oscillators
- 3rd generation DSPLL<sup>®</sup> with superior jitter performance
- Internal fixed crystal frequency ensures high reliability and low aging
- Lead-free/RoHS-compliant

**Applications**

- SONET / SDH
- xDSL
- 10 GbE LAN / WAN
- Low jitter clock generation
- Optical Modules
- Test and Measurement

**Description**

The Si552 dual frequency VCXO utilizes Silicon Laboratories advanced DSPLL<sup>®</sup> circuitry to provide a very low jitter clock for all output frequencies. The Si552 is available with any-rate output frequency from 10 to 945 MHz and selected frequencies to 1400 MHz. Unlike traditional VCXO's where a different crystal is required for each output frequency, the Si552 uses one fixed crystal frequency to provide a wide range of output frequencies. This IC based approach allows the crystal resonator to be optimized for superior frequency stability and reliability. In addition, DSPLL clock synthesis provides superior supply noise rejection, simplifying the task of generating low jitter clocks in noisy environments often found in communication systems. The Si552 IC based VCXO is factory configurable for a wide variety of user specifications including frequency, supply voltage and output format. Specific configurations are factory programmed into the Si552 at time of shipment, thereby eliminating the long lead times associated with custom oscillators.

4. Controlling dimension is in millimeters (mm).

## 4. Ordering Information

The Si552 was designed to support a variety of options including frequency, tuning slope, output format, and  $V_{DD}$ . Specific device configurations are programmed into the Si552 at time of shipment. A unique part number associated with these options and frequencies will be assigned. The Si552 Dual Frequency VCXO is provided in an industry-standard, 7x5 package.

Part numbers for the Si552 Dual Frequency VCXO are determined by following configuration tables. Silicon Labs provides a Windows-based part number configuration tool to simplify this process. Refer to [www.silabs.com/VCXO](http://www.silabs.com/VCXO) to access this tool and for further ordering instructions.
